

2023 Backyard Restoration Sale

Is your backyard stream eroding?
 Having some trouble with your lakefront property?
 Looking for some trees or shrubs to plant at your pond's edge?
 Want to naturalize an area of your property for pollinators and other wildlife?
 Lake SWCD is selling live stakes, native seed mixes and cover crop seeds designed to help you plan and plant your own stream, lakefront or pond restoration.

Live Stakes

Live stakes should be placed 3-6 feet apart in a triangular arrangement. This helps fill spaces best. Live stakes are planted more densely than tree species normally would be, because there is an expectation that not all of the stakes will survive. One bundle of 25 will plant approximately 60 feet of stream if planted in 2 staggered rows.

Seed Mixes

These native seed mixes are designed to increase plant diversity and wildlife interest as well as stabilize soils along your stream, pond or bluff. Cover crop seeds are good for keeping disturbed soils covered. When mixed with native seed mixes they act as a nurse crop, protecting tender seedlings. 4 oz coverage amounts listed in each description.
